****Disconnect battery before installation****

1

Remove the radio from the dash making sure to protect the dash and screen from scratches.

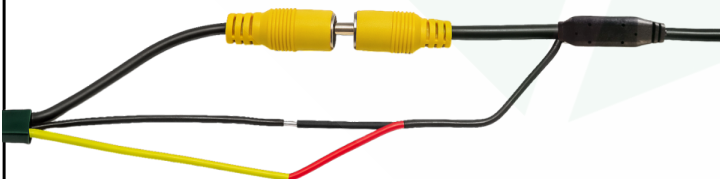

2

Locate the small 4 pin receptacle on the back of your factory screen. Connect our MAZD13 harness into the port.

3

Connect the Yellow RCA's of the MAZD13 harness and the 30ft extension wire as well as the Power (Red) and Ground (Black) of the extension wire to the Power (Yellow) and Ground (Black) of the MAZD13 Harness.

4

Connect the Camera to the extension wire.

5

Test before continuing by turning the car on and safely shifting into reverse. If the camera feed shows then continue to the next steps. If not, follow the troubleshooting steps or contact Tech support via phone, email or chat.

6

With the power off, unplug the camera from extension wire and mount the camera under the license plate lip. You can mount the camera off-center since our camera uses a fish eye lens.

7

Run the extension wire from behind the radio to where the camera is mounted and reconnected the camera and extension wire.

8

Follow Step 5 to retest. Then Reassemble.
